

DOUBLEG SCANNER

CS2 SYSTEM INTEGRITY REPORT • PROFESSIONAL SAMPLE

CHEAT INDICATORS DETECTED

Two independent high-confidence findings and supporting traces require manual review. This sample demonstrates report layout only.

Risk score
174 / 200

Confidence
Very high

REPORT METADATA

Scan ID	DGS-20260719-084512-7C91F2A4
Scan mode	Forensic
Completed	2026-07-19 08:47:31 +08:00
Scanner / rules	1.0.0 / 1.0.0-local
Scan integrity	Completed • local-only • read-only

EXECUTIVE SUMMARY

DoubleG Scanner correlated a browser download record, Windows execution traces, a deleted-file metadata record, and an unsigned user-writable module loaded by CS2. No single filename or keyword was treated as conclusive; the verdict was produced from independent evidence sources.

SCAN SUMMARY

Evidence	Findings	Completed modules	Risk
1,846	4	9 / 9	174

SCAN COVERAGE

Module	Status	Checked	Summary
System profile	Completed	1	Security profile and scanner hash
Running processes	Completed	186	Process path, hash, Authenticode
CS2 loaded modules	Completed	127	Module path/hash/signature
Browser activity	Completed	9,482	Relevant visit/download metadata
Execution history	Completed	1,308	Prefetch, UserAssist, BAM, Recent Items
Deleted-file traces	Completed	94	Recycle Bin metadata only
Drivers and startup	Completed	612	Registered drivers and startup entries
Live network activity	Completed	34	Current TCP and interface counters
High-risk file locations	Completed	2,500	Recent executable/archive metadata

HIGH-CONFIDENCE FINDINGS

CRITICAL • DGS-MODULE-002

Score 85

Unsigned user-writable module loaded by CS2

A module loaded inside CS2 came from a user-writable location and lacked a valid Authenticode signature.

Artifact: C:\Users\Player\AppData\Local\Temp\sample_overlay.dll

Reasons: Loaded by cs2.exe • User-writable path • Signature invalid or absent

CRITICAL • DGS-CORR-013

Score 82

Correlated download, execution, and deleted-file trace

The same high-risk artifact name appeared in independent browser, execution-history, and deleted-file metadata sources.

Artifact: C:\Users\Player\Downloads\sample_loader.exe

Reasons: Browser download • Prefetch/UserAssist trace • Deleted-file metadata

CORRELATED TIMELINE

Time	Source	Event	Artifact
2026-07-18 20:14	Browser	Download metadata recorded	sample_loader.zip
2026-07-18 20:16	Prefetch	Execution trace observed	SAMPLE_LOADER.EXE
2026-07-18 20:18	CS2 module	Unsigned module observed	sample_overlay.dll
2026-07-18 21:02	Recycle Bin	Deleted-file metadata recorded	sample_loader.exe
2026-07-19 08:45	Scanner	Forensic scan started	DGS session

REPORT AND SCANNER INTEGRITY

Field	Value
Scanner binary SHA-256	5A7D...B10E (sample)
Evidence JSON SHA-256	C4F2...9A11 (sample)
Rule database	1.0.0-local
Privacy mode	Local-only / read-only / no upload / no quarantine
Report note	This PDF is a visual sample; values are illustrative.

IMPORTANT INTERPRETATION AND LIMITATIONS

This report is evidence-based and is not an automatic punishment decision. A filename, keyword, unsigned file, or browser record alone is not proof. “Not detected” means completed modules found no known high-confidence indicator; it does not prove cheating never occurred. This user-mode build does not claim universal detection of private kernel or DMA techniques, and it does not restore arbitrary deleted private content.
